Fluid v0.7.0

- **Data and Workload orchestration**
- **How to use cache better for Big Data and AI Application**
- **Scalable , Portable , Manageable Dataset**
- **Different runtime with the same concept model**
- **Easy to use for Hybrid Cloud and Edge**

V0.7.0 Overview

KubeCon

CloudNativeCon

North America 2021

➤ Orchestration

- Dataset Scheduling
- Task Scheduling
- Collaboration of task and dataset scheduling

➤ Data Driven Application

- Machine Learning (TensorFlow, PyTorch) workloads through PVC(POSIX API)
- Big Data(Presto, Spark) workloads through ConfigMap(HCFS API)

➤ Automated Operation

- CronJob for metadata/data load

➤ Runtime Life Cycle management

- HA Improvement
- Refactor CSI Plugin for stable architecture
- Support Runtime in Container Network for underlayer network
- Worker/Fuse in the same Linux Process

➤ Agent

- Report disk number and capacity , Page cache and so on

Enhancement

New

Feature details

KubeCon

CloudNativeCon

North America 2021

➤ Co-orchestrate workload and dataset

- Submit Task and dataset at the same time
- Prefer the node with cache capability when the resource requirement of the workload is meeting
- Then schedule the cache workers to the nodes which already have workload on it

➤ Big Data(Presto, Spark) workloads through ConfigMap(HCFS API)

- Workload should be scheduled with data locality
- The cache directory should be injected into workload Pod
- Short circuit read should be enabled with considering workload pod in container Network

➤ Support Runtime in Container Network for underlayer network

- Master/Worker in Container Network, Fuse in HostNetwork
- Runtime should also support this mechanism (Node ip/Pod ip)

Feature details

KubeCon

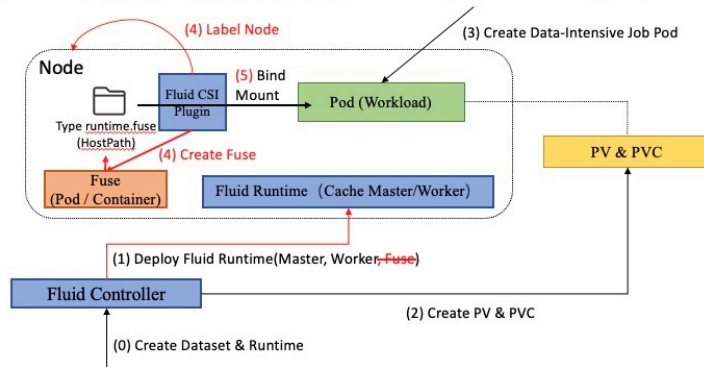

CloudNativeCon

North America 2021

➤ Refactor CSI Plugin

- Lazy Pod initialization
- Avoid Pod eviction and OOM Killer
- Make Scheduler aware of reusable fuse cache

➤ Agent

- Report disk capacity
- Map Disk and path of tiered storage
- Make Dataset scheduling with disk capacity info
